EXAMINER

ZHOU, TING

ART UNIT

PAPER NUMBER

2173

DATE MAILED: 05/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	09/995,481		MARTIN ET AL.	
	Examiner		Art Unit	
	Ting Zhou		2173	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 February 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 2 and 4 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 2 and 4 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. The Request for Continued Examination (RCE) filed on 22 February 2006 under 37 CFR 1:53(d) based on parent Application No. 09/995,481 is acceptable and a RCE has been established. An action on the RCE follows.

2. The amendments filed on 25 January 2006, submitted with the filing of the RCE have been received and entered. Claims 1-2 and 4 as amended are pending in the application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yuen et al. U.S. Patent 6,239,794 (hereinafter "Yuen") and Gorham et al. U.S. Publication 2002/0005866 (hereinafter "Gorham").

Referring to claim 1, Yuen teaches a portal comprising a display connected to a remote terminal for displaying an arrangement of cells (the TV display is remotely connected to the broadcast center in order to receive television signals and display broadcast programs; the TV display displays an arrangement of cells as shown in Figures 2-5) (Yuen: column 4, lines 14-55 and Figure 1), each cell comprising a visual object and an underlying application that is

displayed upon user selection of the cell (in the displays shown in Figures 2-5, an arrangement of cells are shown, each with a visual object, i.e. displayed text or picture, and an associated application, or function, i.e. an associated program being broadcasted or listed, the program being displayed in the PIP window upon user selection) (Yuen: column 2, lines 5-35 and column 5, line 16 – column 6, line 51); and a user input device for inputting user inputs to select one of the cells (the remote controller shown in Figure 6 accepts user inputs for selection of cells such as program listings) (Yuen: column 7, lines 15-33), wherein at least one cell of the arrangement of cells displays one of a plurality of programs received from a broadcast center and wherein at least one cell is sensitive to the context of a cell displaying a program (as shown in Figures 2-5, cell 42, i.e. the PIP window, displays a current television program while cell 44 displays a program description of the broadcasted program shown in the PIP window 42) (Yuen: column 2, lines 5-35 and column 5, line 16 – column 6, line 51). However, Yuen fails to explicitly teach the underlying application being launched from behind the cell upon user selection of the cell, via opening the underlying application for viewing. Gorham teaches a graphical user interface for displaying information similar to that of Yuen. In addition, Gorham further teaches that an underlying application is launched from behind the cell upon user selection of the cell, wherein launching the underlying application comprises opening the underlying application for viewing (when the user clicks on an object such as an icon, the underlying application is opened and displayed) (Gorham: page 4, paragraph 0054). It would have been obvious to one of ordinary skill in the art, having the teachings of Yuen and Gorham before him at the time the invention was made, to modify the display of an arrangement of cells of Yuen to include the opening of an underlying application for viewing taught by Gorham. One would have been motivated to make

such a combination in order to make efficient use of a given display area while simultaneously handling large data sets of information; this combination allows the system to manipulate a large amount of information while conserving screen space for the display of relevant information.

Referring to claim 2, Yuen, as modified, teach the cells include one or more dynamically changing cells (for example, cell 42 shown in Figure 2 displays real-time images of the current television program selected by the user and changes dynamically in response to user selections of different programs from the program listings guide) (Yuen: column 5, line 16 – column 6, line 51).

Referring to claim 4, Yuen teaches a method comprising receiving a plurality of broadcast programs (the television receiver receives broadcasting programs to be displayed in cell 42 of Figures 2-5) (Yuen: column 4, lines 5-55 and column 16, lines 13-18); and generating a portal comprising a plurality of cells containing live video of at least some of the received program (the TV display displays an arrangement of cells as shown in Figures 2-5; cell 42 contains and displays live, or real-time images of currently broadcasting programs) (Yuen: column 2, lines 5-35 and column 5, line 16 – column 6, line 51), wherein at least one of the plurality of cells comprises a visual object and an underlying application that is displayed upon user selection of the at least one cell (in the displays shown in Figures 2-5, an arrangement of cells are shown, each with a visual object, i.e. displayed text or picture, and an associated application, or function, i.e. an associated program being broadcasted or listed, the program being displayed in the PIP window upon user selection) (Yuen: column 2, lines 5-35 and column 5, line 16 – column 6, line 51); and at least one further cell of the plurality of cells associated with an application whose function is dependent on the context of a cell containing a live video

Art Unit: 2173

(cell 44 in Figures 2-5 displays a program description of the broadcasted program shown in the cell 42; in other words, the description displayed in cell 44 is dependent upon the context of cell 42, i.e. the program being displayed in cell 42) (Yuen: column 2, lines 5-35 and column 5, line 16 – column 6, line 51). However, Yuen fails to explicitly teach the underlying application being launched from behind the cell upon user selection of the cell via opening the underlying application for viewing. Gorham teaches a graphical user interface for displaying information similar to that of Yuen. In addition, Gorham further teaches that an underlying application is launched from behind the cell upon user selection of the cell, wherein launching the underlying application comprises opening the underlying application for viewing (when the user clicks on an object such as an icon, the underlying application is opened and displayed) (Gorham: page 4, paragraph 0054). It would have been obvious to one of ordinary skill in the art, having the teachings of Yuen and Gorham before him at the time the invention was made, to modify the display of an arrangement of cells of Yuen to include the opening of an underlying application for viewing taught by Gorham. One would have been motivated to make such a combination in order to make efficient use of a given display area while simultaneously handling large data sets of information; this combination allows the system to manipulate a large amount of information while conserving screen space for the display of relevant information.

Response to Arguments

4. Applicant's arguments with respect to claims 1-2 and 4 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ting Zhou whose telephone number is (571) 272-4058. The examiner can normally be reached on Monday - Friday 7:00 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached at (571) 272-4048. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
